Learning Styles

We all learn differently in many ways and are focused on separate things. It makes sense that one learning style is not a size fits all. Many people go through the education system winging their education, hoping for the best. Others have their learning down to a more comprehensive science. Many students use three learning styles: visual, auditory, and tactile. Visual learning could be flashcards with a picture that helps you remember. Auditory learning, such as listening to a video, if that works for you, then great! Sometimes, listening back twice on a lecture, you pick up on things you previously skipped over or couldn't focus on—lastly, Tactile learning is a hands-on approach to learning new material by actually applying it. Many jobs seem incredibly complex, but once you work the position you see that its not that hard and only takes some getting used to. My favorite learning style is note-taking. Writing down thoughts and ideas while staying organized helps me switch between subjects. There are a lot of things that can go sideways if you are unorganized. I like to use highlighters and use visual symbolism that I understand to dissect notes. It's all about going at your pace and knowing when to take on a challenge. You just might surprise yourself.
